Summary

I've shipped software for over ten years: Android apps from 2013 to 2021, smart contracts for DeFi protocols like Aave and Synthetix since then, and now desktop AI, including LokalBot, my open-source local AI app. I build with AI coding agents every day.

Experience

Senior Solidity Engineer | TokenLogic — Dec 2025 - Present
Remote | Full-time | Aave DAO service provider

- Developed cross-chain bridge integrations (Chainlink CCIP, Circle CCTP, LayerZero) and GHO/sGHO routing contracts for Aave DAO treasury operations.
- Building vault permission gates, sanctions-oracle checks, and fee extraction for a stablecoin vault product ahead of audit.
- Built execution for a Python strategy engine (KMS-signed Safe transactions, guardrails, observability) and a low-latency Rust liquidation searcher with in-process EVM simulation.

Technical Co-founder (part-time) | Mojo — Aug 2026 - Nov 2026
Remote | Early-stage team of seven

- Brought Mojo, a desktop AI assistant on Tether's QVAC local-AI stack, to Electron on macOS, Windows, and Linux, with consent-first local context and cited retrieval.
- Integrated the Pi agent runtime with sandboxed web search and approval gates for writes.

Senior Solidity Engineer | Synthetix — Jul 2024 - Dec 2025
Remote (Sydney, Australia) | Full-time

- Helped design and build a greenfield v4 deposit contract securing funds for a high-frequency perps exchange, with withdrawals, vault rewards, and a CoW Swap integration.
- Built a Go relayer (NATS, Redis) linking contracts to the exchange backend.
- Worked on Synthetix v3 upgrades (100M+ TVL) and fixed perps audit findings with regression tests.

Solidity Developer | THORWallet DEX — Jun 2023 - Jul 2024
Remote (Zurich, Switzerland) | Full-time

- Developed staking, DEX, and lending contracts for THORWallet and zkFinance, and resolved their audit findings.

Solidity Developer | RMRK — Jul 2022 - Jun 2023
Remote (Zug, Switzerland)

- Co-authored seven finalized Ethereum standards (ERC-5773, 6059, 6220, 6381, 6454, 7401, 7409) and built their reference implementations.

Smart Contract (Solidity) Engineer | MVP Workshop — Jun 2021 - Jul 2022
Belgrade, Serbia | Full-time

- Built NFT liquidity contracts for THEOS on Polygon.

Earlier experience: Android

Android Engineer | Infinum, Zagreb, full-time — Sep 2020 - Oct 2021
Kotlin apps for enterprise clients, including mobile banking and telecom self-care.

Mobile Development Team Lead | Amplitudo, Podgorica — Sep 2019 - Sep 2020
Led a six-person iOS and Android team and taught a six-month Android course.

Android Developer | GTV Corp, Safe Health, Sportamix, GSS Media, Codingo, freelance — 2013 - 2021
Android TV and Fire TV streaming, health tech, and new apps for startups.

Personal Projects

LokalBot | Open-source local AI app — Jun 2026 - Present

Creator and maintainer | github.com/stevyhacker/lokalbot | lokalbot.com

- Swift and SwiftUI macOS app for meeting notes, transcription, screen recall, dictation, and autocomplete: 57 releases, 7,500+ GitHub release downloads, 110 stars, and contributions from three outside developers.
- Five on-device models by default (Qwen3-ASR on MLX, Qwen3.5, LFM2.5 and EmbeddingGemma on llama.cpp, Nemotron on Core ML), with per-task routing to Ollama and OpenAI-compatible APIs, an agent mode with per-action approval, and a read-only MCP server.
- Chose each default model with reproducible Python and PyTorch benchmarks: diarization error fell from 43.4% to 14.6% DER on 8 AMI meeting recordings, and autocomplete p95 latency from 1.8 s to 0.49 s.
- Built about 85% of 425 merged pull requests with AI coding agents, and ported the 150k-line app to Rust and GPUI for Windows and Linux (alpha).
- Set up CI/CD with GitHub Actions, UI and accessibility tests, signed and notarized releases, automatic updates, and Homebrew.

BizStats | bizstats.me

AI business search, financials, and public tenders for 33,000+ Montenegrin companies. Next.js, TypeScript, PostgreSQL.

Skills

Languages: TypeScript, Rust, Swift, Python, Go, Solidity

AI: AI agents, tool calling, MCP, llama.cpp, MLX, Core ML, embeddings, model evaluation

Engineering: Node.js, React, SwiftUI, Electron, PostgreSQL, Docker, CI/CD, AI coding agents (Claude Code, Codex)

Education

University of Montenegro | Computer Science (undergraduate coursework) | 2015 - 2017

Outside work

I live in Podgorica, do photography with a Fujifilm camera, and am a fan of epic fantasy, anime, and manhwa.
